

Penetration Testing – Practical Task

Darian Assur

1. Is the “macdonalds.com” domain reachable? If so, give evidence.

Yes and no, depending on the protocol tested — this is a good example of why pen testers use more than one reconnaissance method.

An ICMP ping to the domain received no replies (100% packet loss), which suggests the host either has ICMP disabled/filtered at the network edge, or a firewall is dropping ICMP traffic:

```
$ ping -c 4 macdonalds.com
PING macdonalds.com (64.190.63.222) 56(84) bytes of data.

--- macdonalds.com ping statistics ---
4 packets transmitted, 0 received, 100% packet loss, time 3053ms
```

However, a direct TCP connection to port 80 (HTTP) on the same IP address succeeded, proving the host is in fact up and reachable — the web service is listening and accepting connections even though ICMP is blocked:

```
>>> import socket
>>> s = socket.create_connection(('macdonalds.com', 80), timeout=5)
>>> print(s.getpeername())
('64.190.63.222', 80)
```

Conclusion: macdonalds.com is reachable. The lack of a ping response is a common hardening measure (blocking ICMP) rather than evidence the host is down, so a pen tester should never rely on ping alone.

2. What is the IP address of the “macdonalds.com” domain?

```
$ nslookup macdonalds.com
Server:          8.8.8.8
Address:         8.8.8.8#53

Non-authoritative answer:
Name:   macdonalds.com
Address: 64.190.63.222
IP address: 64.190.63.222
```

3. Two or three solutions once your email is involved in a data breach

1. Change the password immediately (on the breached account and anywhere else it was reused), and enable multi-factor authentication (MFA) so a leaked password alone is no longer enough to log in.
2. Check the exposure using a breach-lookup service such as Have I Been Pwned, and monitor the account for suspicious logins, password-reset emails, or new devices.
3. Stop reusing passwords across sites (use a password manager to generate unique passwords per account), and be alert for follow-up phishing attempts, since breached emails are frequently targeted afterwards.

4. Assetfinder – first seven subdomains of “burgerking.com”

```
(darian@4L-DASSUR)-[~]  
$ assetfinder --subs-only burgerking.com | head -n 7  
bk-world-prd-01.burgerking.com  
bk-world-prd-02.burgerking.com  
latam02.burgerking.com  
o5193.e.mail.burgerking.com  
link.mail.burgerking.com  
www.burgerking.com  
burgerking.com
```

5. Version of the first JavaScript library listed for “amazon.com” (Wappalyzer)

core-js version 3.17.3

The image is a screenshot of the Amazon.com website with a Wappalyzer browser extension overlay. The Amazon page features a purple header with the Amazon logo, delivery location (South Africa), and a search bar. Below the header is a navigation bar with links like 'All', 'Today's Deals', 'Prime Video', 'Gift Cards', 'Sell', 'Customer Service', and 'Registry'. The main content area has a large purple banner for 'Shop Back to School' with the text 'School essentials at every price'. Below this are several product categories: 'Get your game on' (featuring a video game controller), 'Must-haves for every student' (featuring school supplies), 'Dresses under \$30', 'Shoes under \$50', 'Stationery', and 'Fashion'. The Wappalyzer overlay is a purple sidebar on the right. It has tabs for 'TECHNOLOGIES' and 'MORE INFO', with an 'Export' button. Under 'TECHNOLOGIES', there are sections for 'Miscellaneous' (listing Open Graph and HTTP/3), 'CDN' (listing Amazon CloudFront), 'Advertising' (listing Amazon Advertising), 'JavaScript libraries' (listing core-js 3.17.3), and 'PaaS' (listing Amazon Web Services). There is also a section for 'Something wrong or missing?' with a link to 'Turn quick research into ready-to-use lists'.

6. Google syntax: Samsung cellphone winner named “Amanda Sue” in a PDF

The screenshot shows a Google search results page for the query "Amanda Sue" Samsung winner filetype:pdf. The search bar at the top contains the query. Below the search bar, there are tabs for "All", "Images", "News", "Videos", "Short videos", "Forums", "More", and "Tools". The "All" tab is selected. The search results are listed below the tabs. The first result is from Samsung, titled "Galaxy A Series", with a link to a PDF file. The second result is from the Australian Securities Exchange (ASX), titled "harvest technology group limited - annual report", with a link to a PDF file. The third result is from IEEE Xplore, titled "Table of contents", with a link to a PDF file. The fourth result is from KY PSC (.gov), titled "ki—c- Ts, ,, \---' -s-.- —1'46f the", with a link to a PDF file. The search results are displayed in a list format with the source, title, and a brief description of the document.
