UNCONFIRMED 

Software / Version	Category
Amazon Web Services	PaaS
 AWS Certificate Manager	SSL/TLS certificate authorities
 Amazon CloudFront	CDN

▼ Details

Risk description:

The risk is that an attacker could use this information to mount specific attacks against the identified software type and version.

Recommendation:

We recommend you to eliminate the information which permits the identification of software platform, technology, server and operating system: HTTP server headers, HTML meta information, etc.

Security.txt file is missing

CONFIRMED

port 443/tcp

URL

Missing: <https://www.yourmechanic.com/.well-known/security.txt>

▼ Details

Risk description:

There is no particular risk in not having a security.txt file for your server. However, this file is important because it offers a designated channel for reporting vulnerabilities and security issues.

Recommendation:

We recommend you to implement the security.txt file according to the standard, in order to allow researchers or users report any security issues they find, improving the defensive mechanisms of your server.
